April, 1945. 17 Volumes.

TEACHERS' SCHOOL OF SCIENCE

BOSTON SOCIETY OF NATURAL HISTORY.

LOWELL FREE COURSES.

An exhibition of water-color sketches of Flowering Plants will be given in the class-room of the Society from May 9th to May 13th, inclusive. These drawings were made from nature by Miss Helen Sharp, and have been used in part in the botanical classes of the Lowell Free Courses of the Teachers' School of Science, but it is considered desirable to exhibit the collection as a whole.

This collection includes sketches of about seven hundred species, a number of them being illustrated by two or more drawings to show fruit as well as flower. They are arranged in accordance with the classification in Gray's Manual and are of especial interest in studying plants comparatively: For example, the sketches include seventeen species of Violets, thirteen of Buttercups, a complete set of New England Trilliums and Cypripediums. These with other well represented genera afford ready means of distinguishing species.

The exhibition will be open daily between 12 and 4.30 o'clock on the dates above specified. All interested are invited to attend. No tickets are issued. The entrance to the Class-room is by the basement door on Boylston Street.
